2 Summary

This document provides technical instructions for installing the Salesforce Commerce Cloud (SFCC) LINK integration that lets you integrate Bazaarvoice (BV) solutions with a SFCC storefront. This document is intended for individuals who possess at least a general understanding of the following topics:

- Web development
- SFCC UX Studio integrated development environment (IDE)
- Bazaarvoice Conversations (Ratings & Reviews and/or Question & Answer)
- Interface components

3 Component Overview

3.1 Functional Overview

Bazaarvoice maintains a pre-built integration into the SFCC platform. This pre-built integration is delivered in the form of a SFCC LINK cartridge.

The cartridge is supplied “as-is” and is intended to function as a starter kit for clients to implement Bazaarvoice. It includes support for commonly required integration points, but does not include pre-built functionality for the exhaustive list of Bazaarvoice features. This cartridge may need to be customized by the client to implement functionality not included in the cartridge.

The SFCC LINK integration supports the following Bazaarvoice (BV) feature set:

- Ratings & Reviews
 - Submission
 - Display
 - Hosted Inline Ratings on Category & Search Results pages
 - Feed-based Inline Ratings on Category & Search Results pages
 - Post-Interaction Email (PIE)
 - Bazaarvoice SEO
- Question & Answer
 - Submission
 - Display
 - Bazaarvoice SEO
- BV Pixel
 - Tracks transaction data when orders are placed.
 - Replaces the need for the Post-Interaction-Email feed

The SFCC LINK Integration, which is also referred to as the Bazaarvoice (BV) cartridge, provides the following integration points with Bazaarvoice (BV) solutions:

- SFCC Storefront functionality
 - Ratings & Reviews (R&R)
 - Question & Answer (Q&A)
- For storefront functionality to work properly, the following integration would be set up in business manager
 - Product export feed generation
 - Post-Interaction-Email (PIE) feed generation (Note: purchase data received by Bazaarvoice via the BV Pixel feature can replace the need to enable the purchase feed export. Contact Bazaarvoice for more details.)

3.2 Test Cases

Test cases can be referenced in document [Bazaarvoice_Test_Cases_20.1.0.pdf](#)

3.3 Limitations, Constraints

Use of the Bazaarvoice SFCC LINK cartridge by itself does not grant nor enable use of the Bazaarvoice offerings (e.g. Ratings & Reviews, etc.). Bazaarvoice must separately enable the hosted Bazaarvoice SAAS services for the offerings to be available on the SFCC platform. This may require a separate agreement with Bazaarvoice. Contact Bazaarvoice for details.

3.4 Compatibility

Compatible SFCCAPI version 19.1

Compatible SFRA version 3.2.0

Compatible Site Genesis version 104.0.1

3.5 Privacy, Payment

Customer will create a display name when leaving a review. The display name will be seen to public.

The Bazaarvoice LINK cartridge itself is available free of charge. See “Limitations, Constraints” section for details regarding potential costs involved with enabling the Bazaarvoice hosted SAAS offerings.

4 Implementation Guide

4.1 Setup

For SiteGenesis 2 Integrations: See the document

Bazaarvoice_SFCC_LINK_Cartridge_Integration_Sitegen_Guide_v20_1_0.pdf

For SFRA Integrations: See the document

Bazaarvoice_SFCC_LINK_Cartridge_Integration_SFRA_Guide_v20_1_0.pdf

for detailed instructions for implementing the Bazaarvoice LINK cartridge.

5 Operations, Maintenance

5.1 Data Storage

The export and import feeds will be stored under webdav/Sites/Temp while the jobs are running and deleted when the jobs finished. There will not be feeds storage on Impex.

5.2 Availability

BV hosted services perform with an uptime of 99.9% reliability. Additionally, the Bazaarvoice services are designed in such a way to gracefully fail without impact on the SFCC webstore performance. If the event of failure, Bazaarvoice functionality will simply cease to exist on the target pages.

5.3 Support

Contact partner-support@bazaarvoice.com¹ regarding this LINK cartridge.
